(54) Title: FRUIT CORING DEVICE FOR PRODUCING A CLOSED BORE

(57) Abstract: A fruit coring device including a handle and a tubular member having first and second ends. The tubular member defines a longitudinal axis and has an interior region. One end of the circular tubular member is integral or fast with the handle and the second end defines a member cutting edge. The fruit coring device includes a blade with a cutting edge supported within the circular interior of the circular tubular member substantially normal to the member cutting edge.
